I. EXECUTIVE SUMMARY

The Directive 2013/34/EU on the annual financial statements and related reports of certain types of undertakings, was endorsed in all countries of the ERICA WG during 2015 and 2016. In nearly all countries the main impact of the transposition affects the individual accounts of small firms, with some reduction in the obligatory financial statements and/or in their details. The impact of the implementation on consolidated accounts is in principle of minor importance, been remarkable the change in the treatment of Goodwill, and some exceptions for the obligation to consolidate.

The Directive 2013/34/EU, which is intended to improve the clarity and standardisation of financial statements, does not ensure international comparability since it leaves the door open to two layouts for the profit and loss account (by function and by nature) and two layouts for the balance sheet (horizontal and vertical). The layouts of the balance sheet and profit and loss account specified by the Directive entail considerable changes to the current structure of accounts if they are applied literally. Specifically, there are significant changes in current assets, which no longer differentiates between trade debtors and short-term financial investments. Additionally, there are no longer be a breakdown by maturity of liabilities in the horizontal layout of the balance sheet. The reduction of the administrative burden and the simplification pursued by the Directive, which targets small and medium-sized enterprises in particular, depend on the transposition decrees some of them still not approved, and especially in the level of details finally demanded in the financial statements. Therefore, the evaluation of the impact of the transposition process will need to wait to the end of 2016, once these final decisions have to be taken in some of our countries.

II. INTRODUCTION

The Directive (2013/34/EU on the annual financial statements and related reports) merges and improves the Fourth Council Directive 78/660/EEC on the annual accounts of certain types of companies and the Seventh Council Directive 83/349/EEC on consolidated accounts as regards financial reporting obligations. The stated objectives are to reduce the administrative burden of small and medium-sized enterprises, to facilitate investment and to improve the harmonisation and comparability of the formal requirements of financial statements that must be met by firms and business groups across various countries in the European Union.

The Directive emphasises the type of accounting information to be published by firms and establishes minimum equivalent legal requirements as regards the extent of the financial information that should be made available to the public by undertakings that are in competition with one another. The scope of this Directive is principles-based and aims to ensure that an undertaking cannot exclude itself from that scope by creating a group structure containing multiple layers of undertakings established inside or outside the Union. Under the Directive, this information is based on the size of the undertakings and groups - determined by three variables: volume of assets, turnover and the average number of employees - and stipulates various classifications of undertakings and of business groups. According to the Directive, it is necessary to strike an appropriate balance between the interests of the addressees of the financial statements and the burden that the undertakings must endure to comply with the reporting requirements. The Directive simplifies the preparation of financial statements for small and medium-sized enterprises. The simplifications and exemptions established in this Directive are not applicable to undertakings and groups admitted to trading on a regulated market of any Member State. Annex 1 of this document presents the structure of the new directive and some conclusions about its feasible impact. Annex 2 compares the layouts defined in the Directive and the ERICA format.

The Official Journal of the European Union published this Directive on 29 June 2013 and it came into force 20 days after publication. All Member States belonging to ERICA WG have transposed the Directive into their national legislation before the end of 2015, to be applied in 2016 exercise, although in some cases the impact of the transposition still can't be measured, because it depends on some decrees where it will be established the level of details applicable. Therefore, the analysis of the real impact can't be done yet, and will have to wait for the passing on the Royal Decrees (in some countries it has not been published yet, when this document was written, August 2016) as well as the availability of real cases from 2016 onwards.

III. IMPLEMENTATION PROCESS, SITUATION IN EACH COUNTRY

Austria

The new regulations came into force by January 1st 2015 and are obligatory for financial years starting after December 31st 2015.

Most noteworthy for individual accounts is the increase of the thresholds for small and medium sized companies and the implementation of a micro entity definition (two of the three attributes must not be exceeded: total assets 0,35 mio., revenue 0,7 mio., number of employees 10).

The new regulation provides a reduction of reporting for small and micro entities in particular for the notes. 115.000 small companies and around 65.000 micro entities will be affected.

Also the thresholds for consolidated accounts had been increased (balance sheet total 20 mio. instead of 17,5 mio.; revenue 40 mio. instead of 35 mio.).

Moreover the new regulations provide a better harmonization with international accounting standards. Therefore the following main changes were implemented:

- The concept of extraordinary income and expense had been deleted
- Deletion of certain reserves (related to tax account)
- Broader application of deferred taxes (e.g. loss carry forward)
- Valuation of provisions

The impact on the database of consolidated accounts, above all regarding the changes due to thresholds, is not expected to be very significant.

Belgium

The new regulation is applicable for accounting periods starting on or after the 1st of January 2016.

The most important changes are:

- Regarding the individual financial statements:
 - Creation of the category "micro-entities": 83,6% of the companies that file statutory financial statements become a micro-entity (= ±321.000 entities)
 - Increase of the thresholds for small entities, as a result of which the number of large companies is reduced by approximately 12.500 companies (the category mediumsized entities does not exist in Belgium)

- Preservation of the social balance sheet for all categories of entities as a separate document (not part of the financial statements)
- Each category (large, small and micro) of entities receives its own standardized format for the statutory financial statements. Therefore, the number of standardized formats increases from 2 to 3. The new standardized formats can be filed in PDF format since the summer of 2016 and in XBRL format as from April 1st 2017.
- Regarding the consolidated financial statements:
 - The thresholds for large groups is increased (balance sheet total 17 mio. instead of 14,6 mio.; revenue 34 mio. instead of 29,2 mio.). The impact cannot be determined.
 - Exceptional income and expense is no longer presented separately in the income statement. Information on other non-recurrent income and expense should be provided in the notes.
 - Research costs are no longer capitalized (only development costs)

The amortization period for goodwill and development costs is 10 years at most (instead of 5 years). Amortized amounts cannot be reversed.

France

The French Law for the transposition of the directive came into force in July 2015 and will be obligatory for financial year starting as of January 1, 2016. The main impact of the new regulation on consolidated accounts is the increase of the thresholds for medium sized groups: total balance sheet is now 24 million € (instead of 15 million €), total turnover is now 48 million € (instead of 30 million €). Now, these medium sized groups are not obliged to publish consolidated accounts. Our first estimates shows that around 1800 groups could potentially not publish anvmore their consolidated accounts (out total of 4200 aroups). For groups using equity method for consolidating their subsidiaries, they will be allowed not to publish consolidated accounts (only three groups identified in our database). The last impact on groups concerns goodwill amortization: if they do not have clearly quantifiable useful life expectancy, they will need to be amortized over a period of 10 years (they were not amortized in our previous local rules).

Germany

The German law for the transposition of the directive came into force in July 2015 and is obligatory for financial years starting after December 31st 2015. A voluntary early adoption was only possible for the new rules regarding the size classes.

The main impact of the new regulation on consolidated accounts is the increase of the thresholds for small and medium-sized entities (the new size class of micro-entities was already introduced in 2012 in Germany). In Germany the thresholds for small entities are increased up to the maximum allowed in the directive.

Further changes of the national GAAP related to goodwill and other intangible assets without clearly quantifiable useful life expectancy, which receive an amortization period of 10 years.

In summary, the transposition of the directive reduces the reporting burden for many entities, as more firms are grouped into lower size classes (*about 7,000 entities*) with less reporting requirements.

Greece

The proposals of the Directive 2013/34/EU have been introduced in the Greek Legislation by Law N. 4308/2014. This Law came into force as from January 1st 2015, for financial years starting after 31st December 2014.

Under this law, the definition of micro-entities includes all companies that do not exceed two of the following three criteria: total assets €0.35 mil, revenue € 0.7 mil, and average employee number 10.

The individual accounts of micro entities include the balance sheet, the income statement and the notes. In some special cases, micro entities are allowed to compile only the income statement, or a concise balance sheet together with a concise income statement.

In terms of consolidated accounts, small and medium-sized groups are not obliged to compile consolidated financial accounts, unless one of the group's companies is of public interest.

Italy

The proposals of the Directive 2013/34/EU have been introduced in the Italian Legislation by Law N. 136/2015. This Law came into force as from September 16^{en} 2015, for financial years starting after 31st December 2015. The main changes are the following:

- No reduction in the deposit, that is compulsory for all the limited companies (as actually)
- Simplification for micro-companies (revenues<350K €): the annex is not compulsory
- Concurrence with IFRS: leases, derivatives, own shares, extraordinary items and others
- Introduction of new statements: cash flow, economic relationship with government

Portugal

The Directive 2013/34/EU was transposed into Portuguese national law through Decree-Law no. 98/2015, of the 2nd of June, coming into force for accounting periods starting from the 1st of January of 2016 onward. A set of additional regulations within Portuguese GAAP legislation has been, since the 2nd of June, re-published and harmonized in accordance with the new legislation, a process which has been concluded by mid-August 2015.

Regarding the impact of this legislation, based on the reporting requirements of companies within different size classes, although medium-sized entities must apply the same reporting requirements set out for large-size entities, for micro-companies disclosure requirements have significantly decreased. However, since specific accounting standards have already been applied for those entities (as well as for small companies) before the publication of the Directive, the new legislation impacted mostly on the disclosure requirements of micro-companies related with the notes, an impact which might be mitigated because IES (the Portuguese annual accounts reporting standard) integrates not only an accounting report but also statistical requirements. More specifically, A Working Group has been analyzing the changes to be implemented on IES arising from the Decree-law 98/2015 since summer of 2015.

It is also important to highlight that micro and small companies are not obliged to adopt their specific accounting standards and may adopt a different accounting standard prescribing more complex requirements in terms of disclosures. For instance, micro-companies may choose to report under an accounting standard for small entities and small companies may opt to report under an accounting standard for medium/large entities.

Based on the new legislation, small groups are not required to prepare consolidated accounts. A group is considered to be small if two out of three thresholds are not reached: balance sheet total 6 mio, revenue 12 mio. and/ or 50 employees. These thresholds have decreased when compared with the ones set out in previous legislation concerning consolidating accounts (balance sheet total 7.5 mio, revenue 15 mio. and/or 250 employees) which may lead to the availability of larger number of consolidated accounts in Portugal from 2016 onward. However, the exact impact of these changes cannot be fully assessed at the moment.

Spain

The Accounting Directive has been nominally transposed to the Spanish legislation by the approval of the "Auditing Law, Law 22/2015, of 20th July, to be applied in the exercises opened from 1st January 2016. This has been done nominally, because the details of the transposition will be endorsed with a Royal Decree whose project, though already finished, cannot still be endorsed due to the interim government in the country at the moment of redaction of this report (August 2016). The National Accounting Body (ICAC) has published the final project of Royal Decree in December 2015 that will mainly affect, as it could be foreseen, to the annual individual accounts of the small enterprises. The core of the information will not change (that is, the profit and loss account and the balance, will remain with the same details), but there will be reduction in the Notes disclosed in the annual accounts and it will disappear the obligation to prepare a statement of changes in equity. Related to the Notes, some details will disappear, about tangible and intangible non-financial assets and investment properties, movements during the year on equity and reserves, fiscal situation, subsidies and operations with related parties, environment and C02 emission rights, and finally, information on payment delays. Anyway, the project of Royal Decree

ERICA WORKING GROUP, SEPTEMBER 2016

also foresees some changes in consolidated accounts, the main of them a new treatment of Goodwill and intangible assets.

ANNEX 1. STRUCTURE OF THE NEW DIRECTIVE AND CONCLUSIONS

The Directive comprises 11 chapters. This short note only offers the list of them, and two remarkable information about two of them:

Chapter 1. Scope, definitions and categories of undertakings and business groups.

This chapter defines which undertakings this Directive applies to: sociedad anónima (public limited company), sociedad de responsabilidad limitada (private limited company), sociedad colectiva (partnership), sociedad comanditaria por acciones (limited stock partnership) and sociedad en comandita simple (limited partnership). Also included are entities designated to be of "public interest": listed entities, credit institutions, insurance companies and "those that are of significant public relevance because of the nature of their business, their size or the number of their employees".

The Directive establishes different reporting requirements for undertakings according to the category based on their size:

Group /	Balance Sheet Total	Net Turnover	No. of	Comments
Undertaking			Employees	
Micro- undertakings	€350,000	€700,000€	10	Not exceeding two of the three criteria
Small	€4,000,000 Max: €6,000,000	€8,000,000 Max: €12,000,000	50	Not exceeding two of the three criteria
Medium-sized	€20,000,000	€40,000,000	250	Not exceeding two of the three criteria
Large	€20,000,000	€40,000,000	250	Exceeding two of the three criteria

Chapter 2. Provisions and generally accepted accounting principles.

Chapter 3. Balance sheet and profit and loss account.

The table below shows whether certain information is compulsory or not, based on the size of the undertaking or group:

Group / U	ndertaking	Balance	Profit and	Notes to	Management	Auditing	Consolidat	Power to
		Sheet	Loss	the	Report		ed financial	change the
			Account	financial			statements	statements
				statements

	Publication							balance sheet
								and P&L
Large	Preparation	Compulsory	Compulsory	Compulsory	Compulsory	Compulsory	Compulsory	Require
	and			(2)				additional
	Publication							information

- (1) The Member States may provide an exemption from preparing the management report. They may also demand that not only is the management report drawn up but that these undertakings publish certain additional disclosures only required from medium-sized and large undertakings (see Articles 16 and 17).
- (2) They must also provide additional disclosures in relation to certain items (see Articles 17 and 18)
- (3) The Member States may provide an exemption from preparing consolidated financial statements.
 - Chapter 4. Notes to the financial statements
 - Chapter 5. Management report
 - Chapter 6. Consolidated financial statements and reports
 - Chapter 7. Publication
 - Chapter 8. Auditing
 - Chapter 9. Provisions concerning exemptions and restrictions on exemptions
 - Chapter 10. Report on payments to governments
 - Chapter 11. Final provisions

Main conclusions from the analysis of the Directive:

This Directive is a milestone in the quest for uniform financial information across various countries in the European Union which, albeit positive since it will contribute to greater harmonisation and comparability of financial statements between firms and undertakings in the various countries of the European Union, is limited in the following respects:

It attempts to standardize layouts solely for the balance sheet and profit and loss account without any mention of other existing financial statements in accounting legislation such as the statement of comprehensive income, the statement of changes in equity and the cash flow statement. Although the Directive prepares the ground for each Member State to require additional financial statements, it does not specify which ones they should be nor what layout they should have, but rather gives each country the autonomy to define them, thus departing from the criterion of uniformity and comparability across countries.

It establishes a clear minimum reporting threshold, which should be these layouts stipulated in the Directive and gives each Member State the option of increasing the information required, without setting a maximum threshold. This may give rise to discord between the countries in the Union and, consequently, there may be different reporting thresholds depending on the country in question, once again departing from the harmonisation in reporting by entities in the various countries. It prepares the ground for the **coexistence of the two layouts for the balance sheet and the profit and loss account**. The Directive offers many options to Member States for arbitrary modification of the layouts as well as obligations in respect of publication and preparation of notes and management reports for micro and small undertakings, which may result in different financial reporting requirements and obligations in each Member State.

Following the analysis of the layouts in this document, it seems that although the ERICA layout and that of the Directive are in line, there are considerable differences in the breakdowns and information offered by each one of them. Based on this Directive, in the case of a single system of presentation, the approval of the new Directive will necessarily involve changes in the legislation of Member States. This Directive was conceived and created to facilitate the tasks of small enterprises, and has had to allow Member States to impose on medium-sized and large undertakings requirements which go beyond the minimum levels stipulated in this Directive. Thus, we may have to make many changes to the layouts with all the attendant accounting, statistical, IT and analytical implications.

ANNEX 2. ANALYSIS OF THE NEW DIRECTIVE: COMPARISON OF THE LAYOUTS DEFINED ON IT, WITH ERICA FORMAT

The Directive contains the general accounting principles which underlie the European reform of annual accounts. One of the Directive's main objectives is to harmonise the formal requirements which must be met by public limited companies and private limited companies and which currently extend to the partners of a partnership or limited partnership as well as undertakings designated to be of "public interest": listed undertakings, credit institutions, insurance companies and "those that are of significant public relevance because of the nature of their business, their size or the number of their employees".

The Directive also introduces important changes and recommendations which include, most notably, the classification of undertakings and groups, and the measurement basis of fixed assets; however, from the point of view of the Central Balance Sheet Data Office the following points are the most salient:

- The comparability of financial information in the Union as a whole is not ensured, although it is one of this Directive's objectives since:
- .1 Despite the single balance sheet structure to facilitate comparison of the financial position of the various undertakings in the European Union, the option of the two layouts, namely horizontal and vertical, breaks its standardisation, affecting therefore the comparison of companies.
- .2 Similarly, there are two options for the structure of the profit and loss account: the layout showing the nature of expenses and that based on the function of expenses. The Member States should provide for the use of one or both of these layouts. This presentation departs from the comparability of results between different undertakings.
- As a result of the need for the comparability of financial information in the Union as a whole, Member States must permit an accounting system to be used within a common framework for the recognition, measurement and presentation of, *inter alia*, value adjustments, goodwill, provisions, stocks of goods and fungible assets, and income and expenditure of exceptional size or incidence. We should accept that, in principle, this sounds great for CBSOs needs.
- The Member States are strongly encouraged to develop electronic publication systems. So here again we find a very promising statement to gather data in the future in an easy way.

Comparison of the layouts with ERICA format

As it has been said, the new Directive establishes for undertakings and groups not admitted to trading on a regulated market of any Member State, a specific layout for the balance

sheet and the profit and loss account what in theory could be seen as an attempt to move towards correctly standardising, harmonising and comparing financial reporting, the problem is that, first, the layout can be modified by Member States, and second, because the Directive permits the option to the members states of using two different layouts when preparing the balance sheet and the profit and loss account. Having all this in mind, ERICA WG has decided to compare these layouts provided in the Directive for non-listed undertakings and groups, with the current ERICA format, which is established for listed groups, in order to better understand the possible impacts of the introduction of the Directive, in consolidated accounts.

Below we compare these layouts with those currently existing in the ERICA Working Group. In this analysis the lines where differences may exist between the two layouts are shaded in blue (see Tables 1-4). In some cases, in order to make it easier to identify the differences, other colours have been used. Thus, the following are compared:

- The ERICA balance sheet with the horizontal layout of the Directive, since the vertical layout entails a conceptually different presentation.
- The layout of the profit and loss account by function and by nature.

Balance Sheet. Assets (See Table 1a and Table 1b).

The main differences relate to:

- Subscribed capital unpaid. Under the Directive, if a Member State permits the presentation of subscribed capital unpaid under the Equity caption on the liabilities side, this is admissible. In that case, it would be in line with the ERICA layout.
- Formation expenses. This is treated in the Directive as a separate caption, whereas under the ERICA layout it would be included in "Intangible Assets-Cost of development".
- Lines in the ERICA format that are not included in the New Directive Format: Investment property; Biological Assets; Investments in related parties; Investments in related parties, of which, equity accounted investments; Deferred tax assets; Other financial assets, non-current, of which, derivatives (including hedging assets); Current tax receivables (only income tax); Trade receivables, net, of which, receivables arising from construction contracts; Remaining assets, current; Non-current assets and disposal groups held for sale or held for distribution to owners; Assets, total.
- Lines in the New Directive Format that are not included in the ERICA format: Concessions, patents, licenses, trademarks and similar rights and assets, (a). Acquired for valuable consideration and need not be shown under C (I) (3); Concessions, patents, licenses, trademarks and similar rights and assets, (b). Created by the undertaking itself, in so far as national law permits their being shown as assets; Financial Assets, shares in affiliated undertakings; Financial Assets, loans to affiliated undertakings; Financial Assets, participating interests; Financial Assets, Loans to undertakings with which the undertaking is linked by

virtue of participating interests; Financial Assets, Investments held as fixed assets; Financial Assets, Other loans; Stocks, Raw materials and consumables; Stocks, Work in progress; Stocks, Finished goods and goods for resale; Stocks, payments on account; Investments, share in affiliated undertakings; Investments, own shares; Investments, other investments; Debtors, Trade debtors; Debtors, amounts owed by affiliated undertakings; Debtors, amounts owed by undertakings with which the undertakings is linked by virtue of participating interests; Debtors, Other debtors; Debtors, Subscribed capital called but not paid; Debtors, Prepayments and accrued income.

Balance Sheet. Liabilities (see Table 2a and Table 2b).

The main differences relate to:

- Equity. The main differences are the different breakdowns of reserves in the ERICA layout and that of the Directive, as shown in Table 2. Similarly, the layout of the Directive does not include the lines Non-controlling interests, other equity interest, although the consolidated layout should include all those lines which are inherent in consolidated financial statements. In the layout of the Directive there is a breakdown of profit or loss brought forward and for the financial year, which does not exist in the ERICA layout.
- The breakdown into non-current and current liabilities does not exist in the layout of the Directive, whereas it does exist in the ERICA layout.
- The breakdown of provisions is more detailed in the layout of the Directive (there is one more line, provisions for taxation) and in the Directive there is no breakdown between current and non-current provisions.
- Lines in the ERICA format that are not included in the New Directive Format: Deferred income, non-current and current; Deferred income, non-current and current, of which government grants; Deferred tax liabilities; Other non-interest-bearing liabilities, non-current and current; Other non-interest-bearing liabilities, non-current and current of which, derivatives (hedging liabilities); Other non-interest-bearing liabilities, non-current and current of which, trade payables; Other non-interest-bearing liabilities, non-current and current of which, advances received; Current tax payables; Liabilities included in disposal groups held for sale; Equity and liabilities total; Dividends distributed to owners; Proposal of dividends to be distributed to owners.
- Lines in the New Directive Format that are not included in the ERICA format: Payment received on account of orders, in so far as they are not shown separately as deductions from stocks; Bills of exchange payable; Amounts owed to affiliated undertakings; Amounts owed to undertaking with which the undertaking is linked by virtue of participating interests; Other creditors, including tax and social security authorities; Accruals and deferred income.

Table 2a

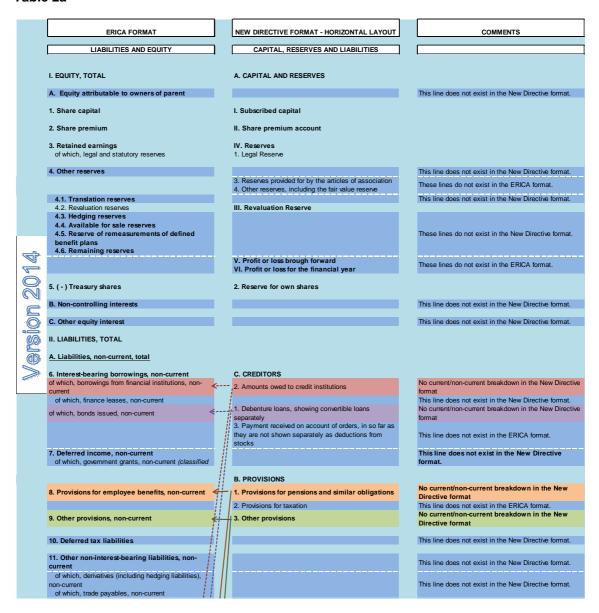

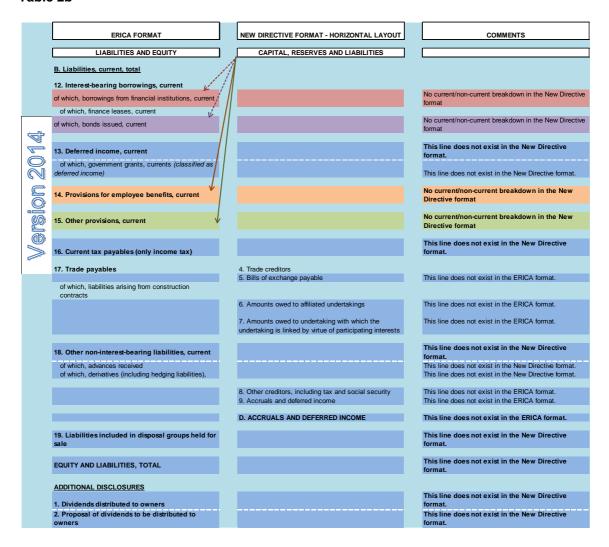

Table 2b

Profit and Loss Account by Function (see Table 3).

The main differences lie in that the new Directive does not include many breakdowns which are included in the ERICA layout. Note that the breakdown of finance income included in the layout of the Directive is completely different to that of ERICA. The layout of the Directive does not include intermediate P&L captions in the profit and loss account, such as profit (loss) from operating activities, net financial result, profit (loss) before tax and the distinction between profit (loss) attributable to non-controlling interests and profit (loss) attributable to owners of parent, nor does it include profit (loss) from discontinued operations.

Profit and Loss Account by Nature (see Table 4).

The main differences are that the new Directive does not include many breakdowns which are included in the ERICA layout. Note that the breakdown of finance income included in the layout of the Directive is completely different to that of ERICA. Like the layout of the profit and loss account by function, the profit and loss account by nature does not include intermediate or aggregate P&L captions such as operating revenue, operating expenses, profit (loss) from operating

activities, net financial result, profit (loss) before tax and the distinction between profit (loss) attributable to non-controlling interests and profit (loss) attributable to owners of parent, nor does it include profit (loss) from discontinued operations.
