IMPORTANT INFORMATION ABOUT THE SOURCE USED (ERICA¹ DATABASE)

The data used in this study are obtained from publicly available financial statements of European non-financial listed groups, having been treated manually, by CBSO statisticians and accounting specialists, to be fitted on a standard European format (ERICA format); this manual treatment involves, in some cases, the interpretation of the original data, a constraint that readers of this document should bear in mind.

The database does not represent the total population of European non-financial groups; nevertheless, the coverage attained with ERICA (in the whole dataset of around 1.000 groups, as well as in ERICA+, a subset of around 200 groups with extra accounting details) on the listed European groups is well-attuned to the situation and national composition of the stock markets. The analysis performed in this document with both datasets of ERICA, with the limitation expressed in the previous paragraph, provides a view of the position and performance of the listed non-financial European groups.

The opinions of the authors of this document do not necessarily reflect those of the national central banks to which they belong or those of the ECCBSO.

All the graphs and tables presented in the document are from the same source (ECCBSO-ERICA database), unless otherwise indicated.

¹ ERICA (European Records of IFRS Consolidated Accounts) is a database of the European Committee of Central Balance Sheet Data Offices.

Statistical Annex 7 Multiple linear regression model

The variables used in the model are shown in the following table:

Table 1: INDEPENDENT VARIABLES AND PROXIES USED

| Concept | Proxy | Symbol |
|---------------------------------|---|-------------------------|
| Size | Total assets | ASSETS |
| Intangible Assets | Intangible assets | INTANGIBLE |
| Activity | Revenue | REVENUE |
| Profitability | Profit (loss) | NET_INC |
| Risk and business opportunities | Research and Development | RESEARCH_DEVELOPMENT |
| Sector | Energy sector | Sector_Energy (dummy) |
| | Industry sector | Sector_Industry (dummy) |
| | Construction sector | Sector_Const (dummy) |
| | Market services, trade and real estate sector | Sector_MS_RE (dummy) |

Explanation of concepts and the relationships

Size: We expect a positive relationship between size and the amount of fair value revaluation. Larger groups have more assets, so are more likely to have fair value revaluations.

Intangible assets: Firms with more intangible assets due to the difficulty of assessing the value of these assets, in principle tend to do more revaluations. The management team has sizable discretionary power in respect of these kinds of assets.

Activity: Groups with large revenues have greater liquidity and commodities risks and need to take out more hedging instruments.

Profitability: As described above, managers tend to provide stable results. In good years they manipulate the results negatively, so that in bad years it is possible to compensate for losses (negative relationship).

Risk and business opportunities: Groups that spend more on research and development are not yet mature, business is booming. These groups have riskier assets, so more business risk. These groups tend to take out more hedging instruments.

Sector: Groups within the same industry share a set of features, such as the same types of assets, practices and similar risks. It is expected that groups within the same sector show the same behavior in terms of fair value.

Model specification

$$\text{ABS_FV}_K = \alpha_1 + \beta_1 * \text{ASSETS} + \beta_2 * \text{INTANGIBLE} + \beta_3 * \text{REVENUE} + \beta_4 * \text{NET_INC}$$

$$+ \beta_5 * RESEARCH_DEVELOPMENT + \sum_{i=6}^9 (\beta_i * Sector_j) + \varepsilon_1$$

where:

ABS_FV_K - Absolute value of fair value variables (FV_Total, FV_Profit_Loss and FV_Equity);

Sector_j – 4 dummy variables (Sector_Energy, Sector_Industry, Sector_Const and Sector_MS_RE);

Dimension_p – 3 dummy variables (Small, Medium and Large);

ε_1 - Error term, disturbance term, or noise.

Linear regression models

Table 2: LINEAR REGRESSION MODELS (ESTIMATION METHOD: OLS)

| Dependent variable | ABS_FV_Total (1) | ABS_FV_Profit_Loss (2) | ABS_FV_Equity (3) |
|----------------------|---------------------|---------------------------|----------------------|
| (Constant) | 3.299.388 | 5.241.984 | 4.355.846 |
| ASSETS | 0,0026 (a) | 0,0028 (a) | 0,0038 (a) |
| INTANGIBLE | -0,0010 | -0,0050 (a) | -0,0005 |
| REVENUE | 0,0017 | -0,0001 | -0,0012 |
| NET_INC | 0,0253 (a) | 0,0198 (a) | 0,0028 |
| RESEARCH_DEVELOPMENT | -0,0754 (a) | -0,0599 (a) | -0,052 (a) |
| Sector_Energy | 17.494.520 | 50.427.349 | -55.547.847 |
| Sector_Industry | 5.125.190 | -5.973.870 | 7.889.093 |
| Sector_Const | 77.096.080 | 20.421.735 | 41.437.053 |
| Adjusted R Square | 0,328 | 0,314 | 0,374 |

a Statistically significant at a level of 5%

Although the little explanatory power of the models, some conclusions can be drawn:

- Size, measured by total assets (ASSETS), is statistically significant explaining fair value. Groups with more assets tend to use fair value revaluation.
- Intangible assets (INTANGIBLE), activity (REVENUE), profitability (NET_INC) and Research and development (RESEARCH_DEVELOPMENT) are statistically significant but show signs contrary to expected.
